

ICA0002: IT Infrastructure Services

#3

Web servers

Ansible configuration file

Roman Kuchin
Juri Hudolejev
2019

Basic Terms

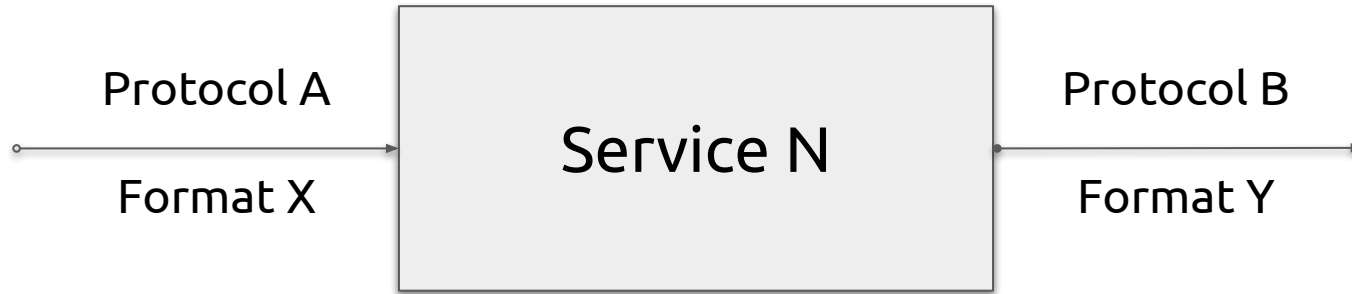

WWW: World Wide Web, the Web

URL: Uniform Resource Locator

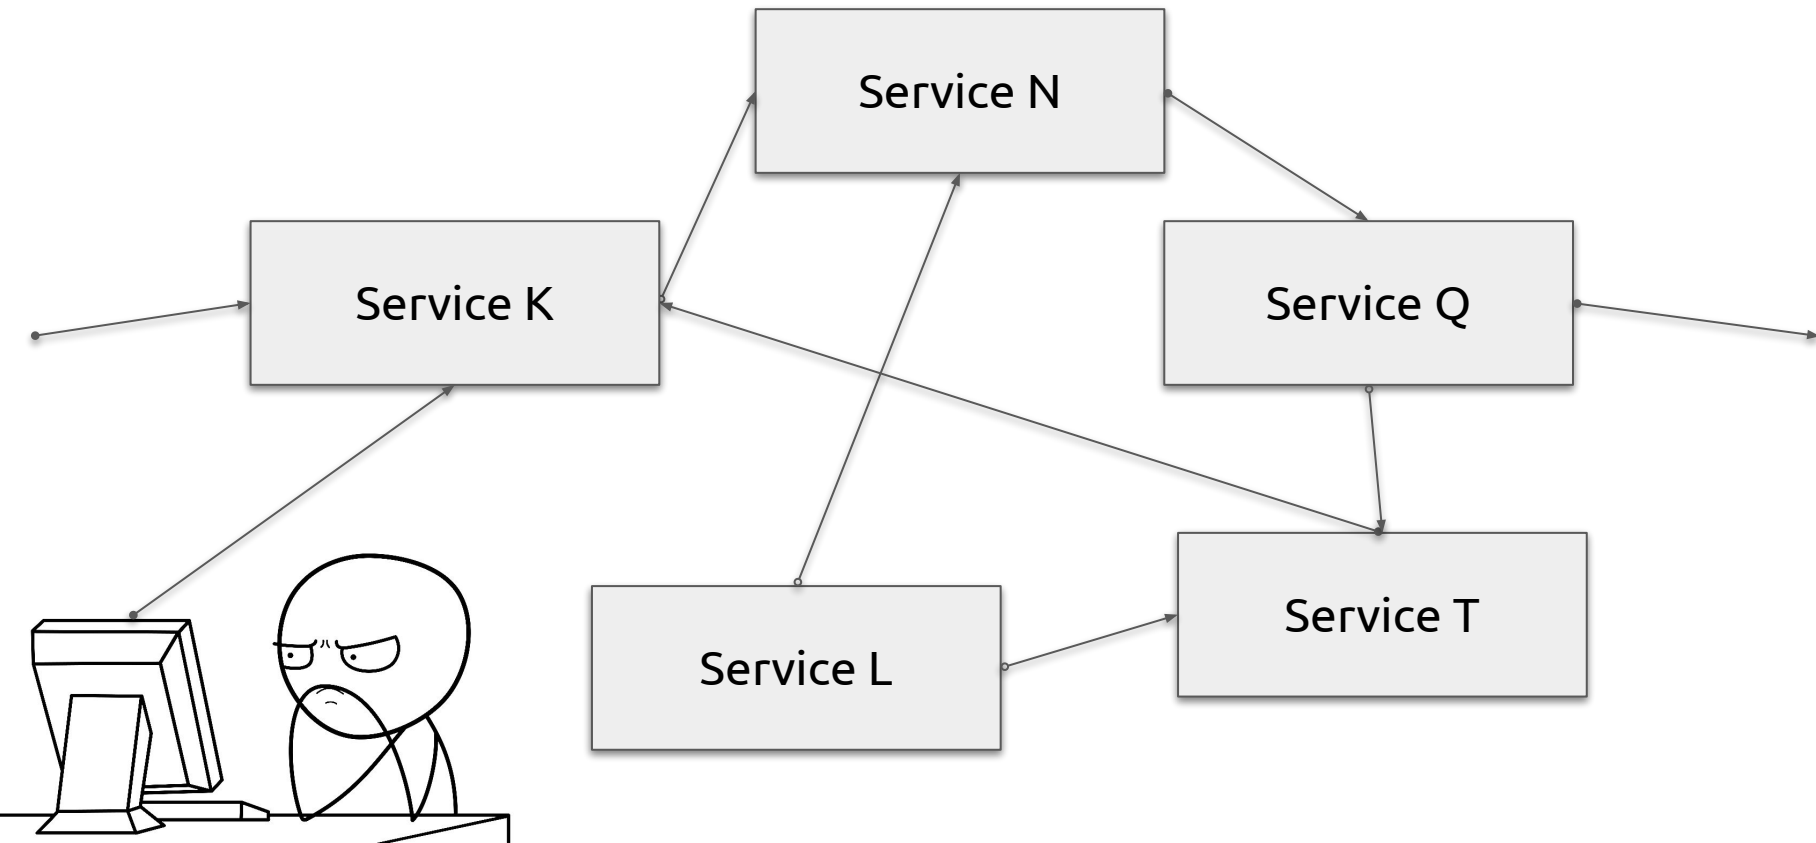

Web server

Web client (web browser, user agent)

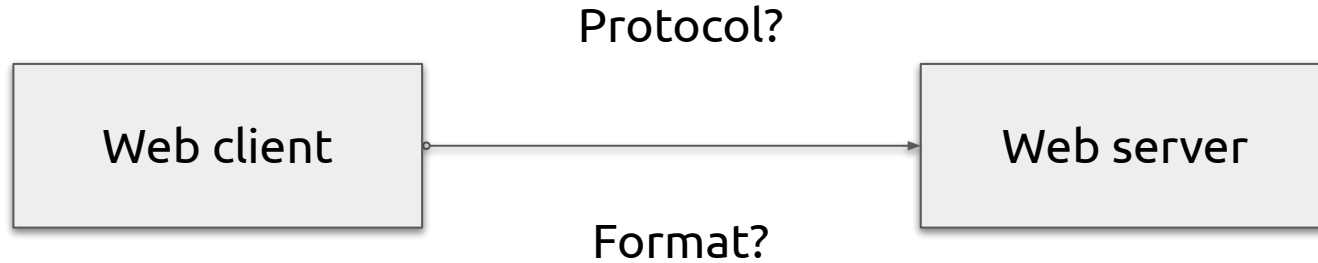

(very) Generic IT Service

Service Communication

Web Client and Web Server

Web Client and Web Server

Web Client and Web Server

FTP, Gopher, HTTP/0.9, HTTP/1.0, HTTP/1.1,

HTTP/2, HTTP/3, HTTPS, SPDY,

Demo time!

Behind the Web Server

Behind the Web Server

Static documents:

- web server sends files from local filesystem as is

Dynamic documents:

- web server calls scripts to generate the resource on the fly (dynamically) and send that generated resource to the client

Proxy mode:

- web server forwards request to other services

Other Topics

Not discussed in detail in this course but somewhat covered in labs as needed:

- HTTPS, SSL/TLS
- WebSockets, HTTP/2, HTTP/3
- CGI, WSGI
- Caching
- Proxying
- High availability

Web Server Market Share

Apache HTTPd

The oldest of the existing mainstream web servers, and still most widely used

Free and open-source, maintained by Apache Software Foundation

First release in 1995, current version: 2.4

Modules for TLS, server-side scripts, authentication, proxying, etc.

- List of modules: https://en.wikipedia.org/wiki/List_of_Apache_modules

Web site: <https://httpd.apache.org>

Questions?

Ansible Configuration File

We previously used something like this command to run playbooks:

```
ansible-playbook -i hosts init.yml
```

Some often used arguments can be provided in the Ansible configuration file

Ansible configuration files:

- **/etc/ansible/ansible.cfg** -- do not use
- **~/.ansible.cfg** in your home directory -- better
- **ansible.cfg** in the project directory -- use this if unsure

Ansible Configuration File

Similar structure as inventory file:

```
[section_name]  
key_name = value  
another_key_name = another_value
```

```
[another_section_name]  
...
```
